A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply signed above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-7,10-12,15,17-20, are rejected under 35 U.S.C. 102(b) as being anticipated by USP 5,955,352 (Inoue et al.).

The patent discloses an instrument for chemical and microbiological tests which comprises a solid substrate (1), a sample absorbing portion (3), and a liquid absorbent body (2), see figures 1-3. Elements (1,2, and 4) constitute a container, the sample holding portions is considered to read on the claimed "at least one member" and is disclosed as being selected from "sponge-like porous substance" (col. 7, lines 28-46) or water-absorbing gels (col.7, lines 57-60). Reagents or anti-bacterial agents can be previously held in the sample holding portions (3) and a bacterial-containing culture medium can be added to the hollow region of the instrument (col.6, lines 51-67). Applicant's attention is specifically drawn to figures 4 and 5 which shows a sample absorbing region (11), a bared section within the sample absorbing region for the placement of a reagent (12) and the addition of a sample of cells and culture medium. The regions surrounding the elements (3) in figure 3 are also considered to constitute "bared" regions. The disclosure further discloses a method of forming the instrument shown in figures 3-5 which reads on claims 10,12,15,17, and 18 (col. 9, lines 20-39).

Application/Control Number: 10/693,542 Page 3

Art Unit: 1744

Further, applicants attention is drawn to the embodiment illustrated in figures 18-21 which includes a liquid- absorbing body (2) having hollow portions extending through the body. The body (2) can be made from sponge-like porous bodies or gels (col.11, lines 42-51). The body (2) sits atop the sample holding region (3) which has wells for holding drugs or medicine (see example # 6). A broth containing bacterial cells is added to the sample-holding portions which is considered to read on the claimed "culture medium components". The sample-holding portions (3) in figure 21 are considered to be cylindrical and read on claim 6.

Allowable Subject Matter

Claims 8,9,13,14, are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art of record does not teach or suggest the structural features of claims 8 and 9 nor the process steps defined in claims 13 and 14.

As allowable subject matter has been indicated, applicant's reply must either comply with all formal requirements or specifically traverse each requirement not complied with. See 37 CFR 1.111(b) and MPEP § 707.07(a).

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The US patent 5,605,836 (Chen et al.) is generally related to the claimed invention.

Application/Control Number: 10/693,542

Art Unit: 1744

Any inquiry concerning this communication or earlier communications from the examiner should be directed to David A Redding whose telephone number is 571-272-1276. The examiner can normally be reached on Mon.-Fri. 6:00 - 3:00.
